

ANOTHER LOOK AT A COMMON CRYPTOCURRENCY

# PZM CASH

Same same, but different

“Virtual currencies will **have long-term potential**, especially if innovations contribute to the development of a faster, more reliable and efficient payment system.”

Instant transactions, no refunds, no account freezes, minimum commissions for international wire transfers, no minimum balances, no maximum balances, worldwide access, full transparency, the ability to create an account in a few seconds just like an email account, and the opportunity for the poorest and the richest to take advantage of this technological development. No money-printing, no hyperinflation, no voting on debt limits, no financial assistance to banks, and a completely voluntary basis.

**It looks like the best payment system in the world!**

# About PZM Cash

**PZM Cash** is a cryptocurrency created as a means of payment for a fast-growing digital ecosystem in which the economic motives of each individual participant provide an increase in the overall wealth and wellbeing of the entire community. **The main** strategic success factor for **PZM Cash** is the fact that it will be relying on the growth of scaling and balancing of supply and demand for funds.

## Open source

All the data will be freely available on GitHub with an SDK for applications based on **PZM Cash**

## Decentralization

Decisions on updates and changes are made by a majority of votes using the option built into the native wallet

## Smart contracts

The ability of using the cryptocurrency to create decentralized banks, exchanges, credit services, exchangers, casinos, betting shops, games and applications

## Web3.js Technology

Which is widely available and is used as the basis for the Tron and Ethereum wallets. It allows to conveniently use the wallet as an access key to sites and services in which cryptocurrencies are used as a means of payment

# Distinctive features

## 1 Algorithm

---

Modified  
Proof-of-Stake  
Consensus Algorithm

## 2 Security

---

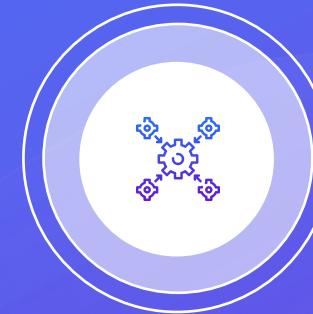

Sidechains providing  
security to ledgers

## 3 Speed

---

**60 seconds** is the average  
time for generating a new  
block

## 4 Integration

---

Maximum features for  
application developers  
(dApps)

## 5 PoS Mining

---

Monthly increase  
of wallet balance  
by up to 21%

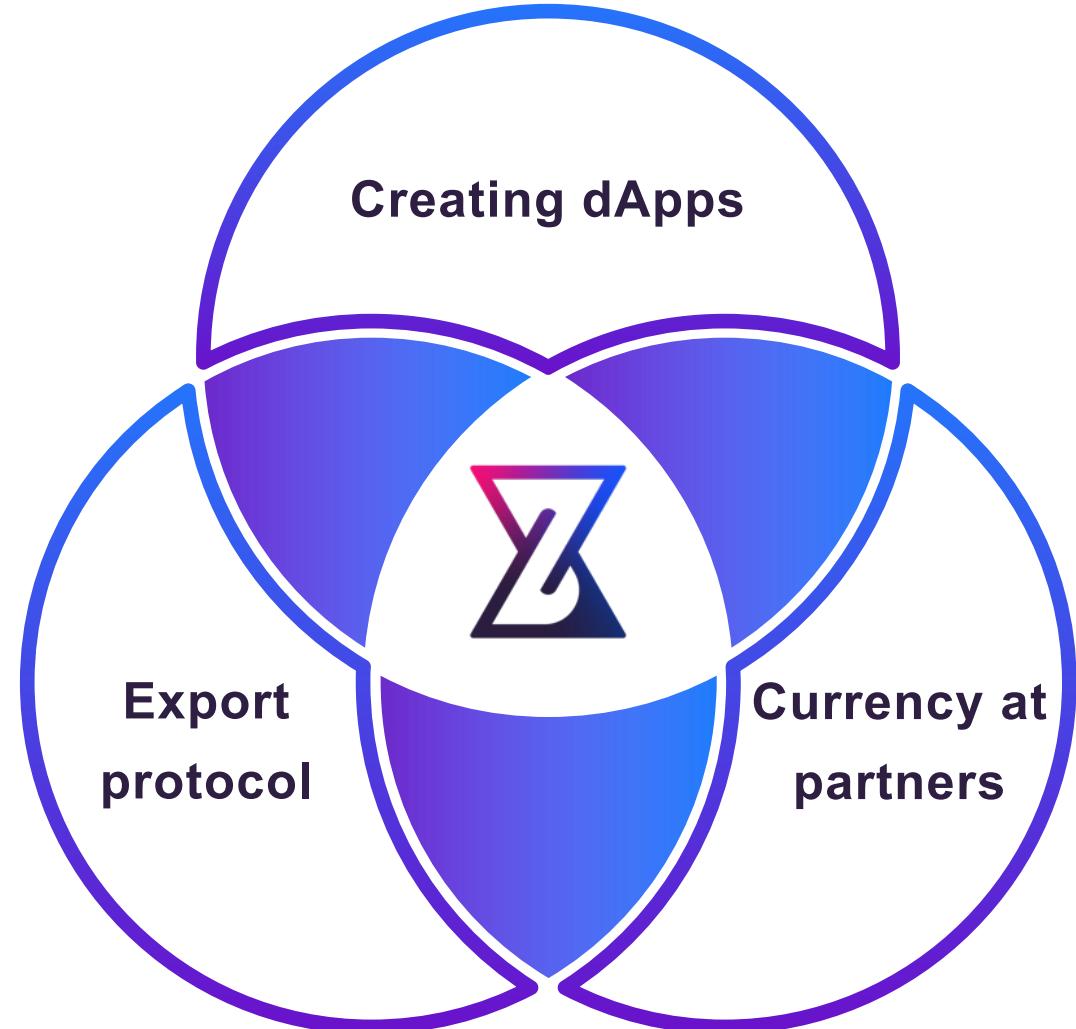

**The key** difference between **PZM Cash** and the “classic” PoS concept lies in the mechanism of ensuring the network with monetary supply. The **PZM Cash** team **refrained** from a full emission approach when generating the first block. Only 1% of the total number of coins will be distributed when the network is launched using pre-mining. The remaining coins will be issued during PoS mining as incentive payments to loyal **PZM Cash** holders for supporting the network.

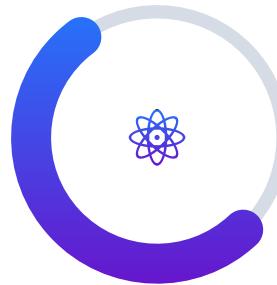

# Network scaling

The main characteristic of **PZM Cash** is its orientation to the rapid scalability of both the money supply and the offer of services from developers and partners. The development and scaling of the **PZM Cash** infrastructure can be carried out in several directions.

# Network scaling

## Creating dApps

Any developer can deploy their decentralized application. They will thus be allocated their own sidechain recorded on top of the main ledger. In this case, each user of the application will have their own wallet

## Currency at partners

PZM Cash can be used as a means of payment on partner projects and platforms. The Web 3js technology implemented in the Prizm Cash Wallet allows users to use the wallet to make payments on partner platforms, such as exchangers, exchanges, IM, etc.

## Export protocol

The source code of PZM Cash is open to everyone, which allows any developer to implement the PZM Cash protocol in their project as a kernel. To do this, users must deploy and run the full network node, install and synchronize a special API module

# Coin emission

The total emission of PZM Cash will amount to **9,000,000,000 coins**.

At the premining stage, **only 1% of the final volume** of coins will be issued.

TOTAL EMISISON

PREMINING

# Premining distribution

## SALES

**63.000.000 PZMC**

Public sales

## MARKETING

**18.000.000 PZMC**

Three-Year-Long Marketing  
Campaigns

## PZMC TEAM

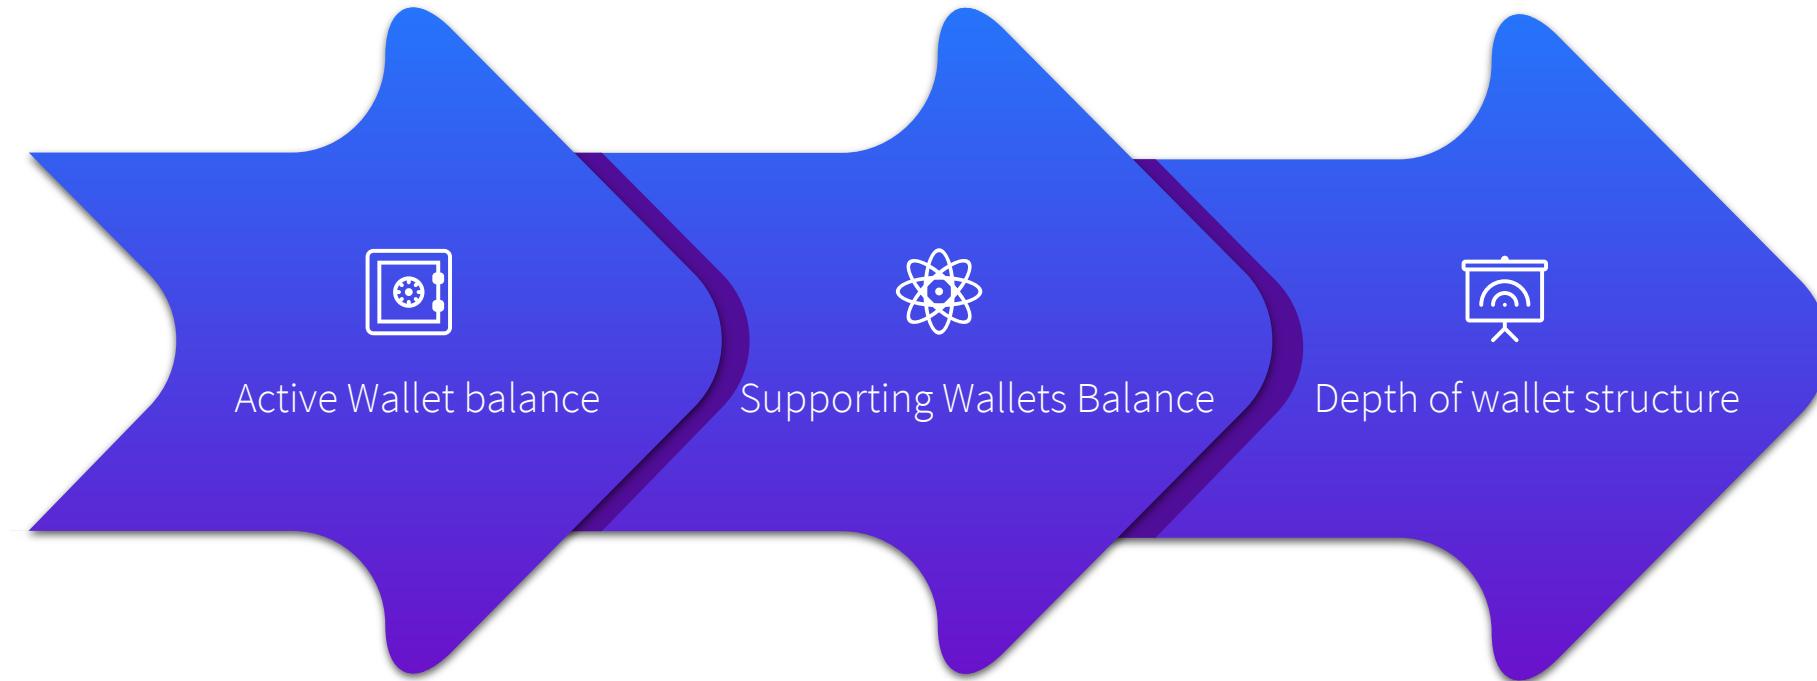

**9.000.000 PZMC**

For the PZM Cash team with  
a one-year lockup period

# Network liquidity growth

PoS mining is provided as the only mechanism for increasing the liquidity of the network and is a mechanism for providing balance increase to loyal users of **PZM Cash**

# Mining PoS mechanism

PoS mining on a wallet starts from **1 PZMC** and automatically stops when a balance of **1,000,000 PZMC** is reached.  
The rate of increase is expressed in monthly percentage terms and depends on two parameters:

The current balance on the active leading wallet;  
The current total balance on supporting wallets, or the wallets that have been added by the owner of the leading wallet as supporting wallets.

| Wallet balance      | % per day | % per month |
|---------------------|-----------|-------------|
| 700 000 – 1 000 000 | 0,23%     | 6,89%       |
| 500 000 – 699 999   | 0,18%     | 5,35%       |
| 300 000 – 499 999   | 0,14%     | 4,14%       |
| 200 000 – 299 999   | 0,125%    | 3,69%       |
| 100 000 – 199 999   | 0,107%    | 3,15%       |
| 50 000 – 99 999     | 0,09%     | 2,63%       |
| 20 000 – 49 999     | 0,072%    | 2,11%       |
| 10 000 – 19 000     | 0,058%    | 1,70%       |
| 5 000 – 9 999       | 0,055%    | 1,61%       |
| 2 000 – 4 999       | 0,052%    | 1,52%       |
| 1 000 – 1 999       | 0,049%    | 1,43%       |
| 500 - 999           | 0,047%    | 1,37%       |
| 100 - 499           | 0,044%    | 1,28%       |
| 1 - 99              | 0,041%    | 1,20%       |

# Supporting wallets

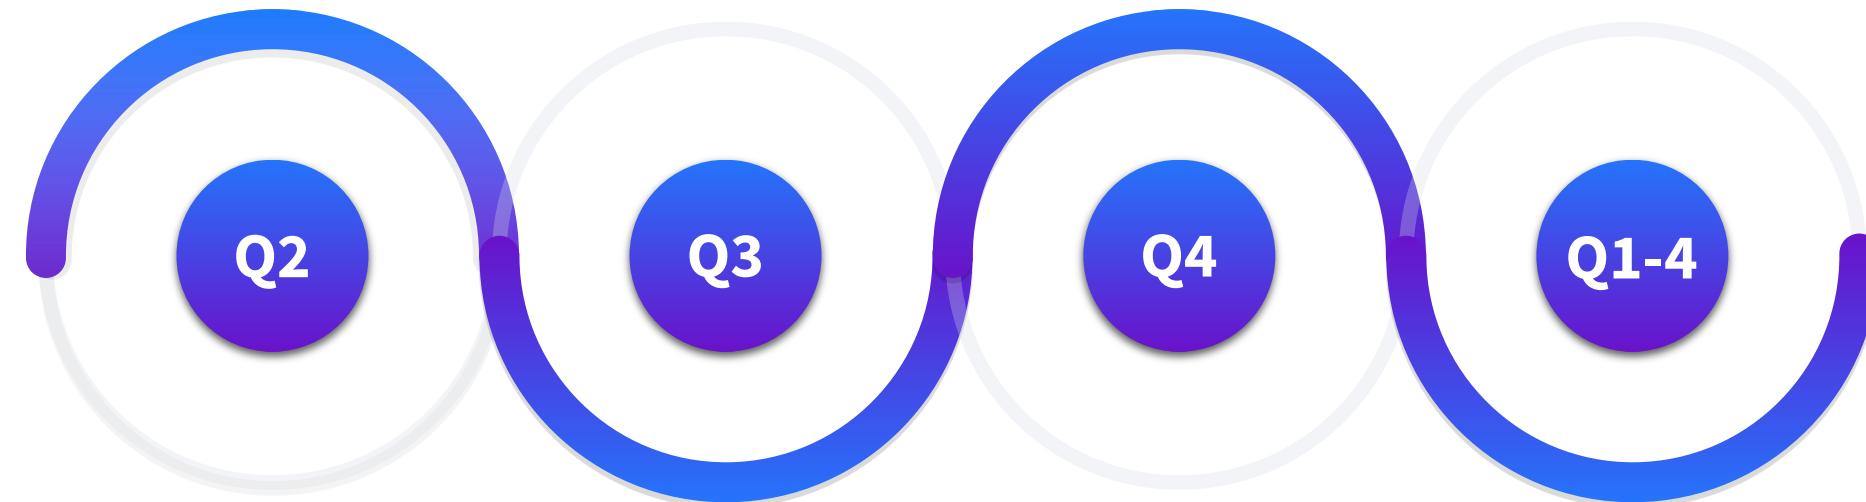

When taking into account the total balance of the supporting wallets, the system takes into **account two levels of structure** depth.

This condition allows to guarantee maximum benefits for active users of the system who contribute to the development of the **Prizm Cash** cryptocurrency.

| Structure balance       | Multiplicator |
|-------------------------|---------------|
| от 100 000 000          | 3,14          |
| 30 000 000 – 99 999 999 | 3             |
| 10 000 000 – 29 999 999 | 2,9           |
| 5 000 000 – 9 999 999   | 2,7           |
| 1 000 000 – 4 999 999   | 2,5           |
| 500 000 – 999 999       | 2,3           |
| 200 000 – 499 999       | 2,1           |
| 100 000 – 199 999       | 1,7           |
| 50 000 – 99 999         | 1,6           |
| 20 000 – 49 999         | 1,5           |
| 10 000 – 19 999         | 1,4           |
| 5 000 – 9 999           | 1,3           |
| 1 000 – 4 999           | 1,2           |
| менее 1 000             | 1,16          |

# Road map

- Public sale of PZMC
- Launch of the main PZMC network
- Launch of the online wallet
- Listing on CoinMarketCap

- Launch of Android / iOS Wallets
- Launch of Web3js
- Entry onto the Asian markets
- Involvement of application and service developers

- Launch of the ability to create smart contracts
- Creation of a network of exchange points
- Entry onto the Latin American market.

- Creation of an ATM network and issuing debit cards
- Opening of PZM Cash Foundation technology hub
- The first international PZM Cash Summit conference
- Integration of new partners and services to expand payment methods
